

The figure displays a large, intricate network graph representing gene-gene or protein-protein interactions. Each node is a small circular icon containing a colorful microarray-like pattern and a label. The nodes are densely packed in the center, with numerous edges connecting them, indicating a high degree of interaction. Some nodes are highlighted with green borders, such as YCL048W-A, GTO1, and YDL219W. The network has several clusters and branches, with some nodes like DSE4 and POR16 acting as peripheral hubs.
